

**JOSEPH GRIGGS & Co. Ltd. 130th BIRTHDAY**

Knowledge of products is our secret

WITH 130 years' experience, it's hardly a surprise that Griggs is widely regarded as a leading specialist among timber merchants.

One reason why the company enjoys a long-term relationship with many of its trade and private customers is that Griggs' staff have in-depth knowledge of the company's products.

With so many suppliers now in the market-place, Griggs recognises the need to provide a quality and specialised service to its customers.

Therefore the company offers a 48-hour maximum delivery service on many of its products and can offer specialist aspects that

others cannot offer, for example, timber planed to your own pattern, and timber in excess of 6.0m lengths.

Private customers benefit too, explains Managing Director Bryan Kerslake: "Firstly, because they make considerable savings by coming direct to us, and secondly because we are always pleased to offer free advice that can help them make a success of the project they have in mind."

Quality is a much banded-about term, but with Griggs it's fundamental to the way business is done. "That's something that definitely has not changed in the past 130 years" says Bryan.

"The Softwood timber we buy is grown using sustainable management methods in Scandinavia and Baltic States and kiln dried."

Griggs' product range includes:

- Kiln Dried Graded Building Quality Timber
- Joinery quality timber
- Planed timber
- A wide range of pre-primed, top quality MDF mouldings for architrave, skirting, picture rail and more.
- Plywood, chipboard and MDF sheet material.

"That's something that definitely has not changed in the past 130 years. The Softwood timber we buy is grown using sustainable management methods in Scandinavia and Baltic States and kiln dried"

Managing Director Bryan Kerslake

■ **PERFECT FOR SUMMER:** an example of Griggs' timber decking

Decking is easy to install

GRIGGS' timber decking is manufactured from selected Softwood and Tanalised to preserve its natural beauty.

Our system is simple to install and consequently many private customers who are reasonably competent in DIY successfully build a decked area in their own garden.

Alternatively we will be happy to supply the contact details of tradesmen who will make a good job of the installation.

Both trade and DIY customers will find our easy to understand, step-by-step leaflet on building a decked area useful.

It explains everything that you need to know, including that Griggs' decking can be laid in a number of attractive patterns.

You'll discover that our decking range offers exceptional value for money and we are virtually always able to supply immediately from stock for prompt delivery.

Get your timber treated

OUR on-site Protim E415 treatment plant enables a prompt service to customers requiring treated timber.

The Company can treat customer's own timber - this convenient facility is currently being used by Builders' Merchants and joinery companies who

bring their constructional timbers, window frames etc, to us. Alternately we can arrange to collect, treat and return.

Our treatment service is quick, reliable and cost effective, providing a highly effective guard against insect infestation and fungal attack.
